

Legacy

Job Number: 05-0731
 Client: Vision Development Group
 Project Type: Conservation Development
 Project Location: Barrington, Illinois
 Project Initiation Date: 2003
 Project Completion Date: Ongoing
 Project Size: Approximately 40 acres

AES was the prime for this project.

Project Goals

- Protect the high-quality wetlands on site
- Create trails and interconnect them throughout the development
- Incorporate wildlife habitat into this development

Project Results

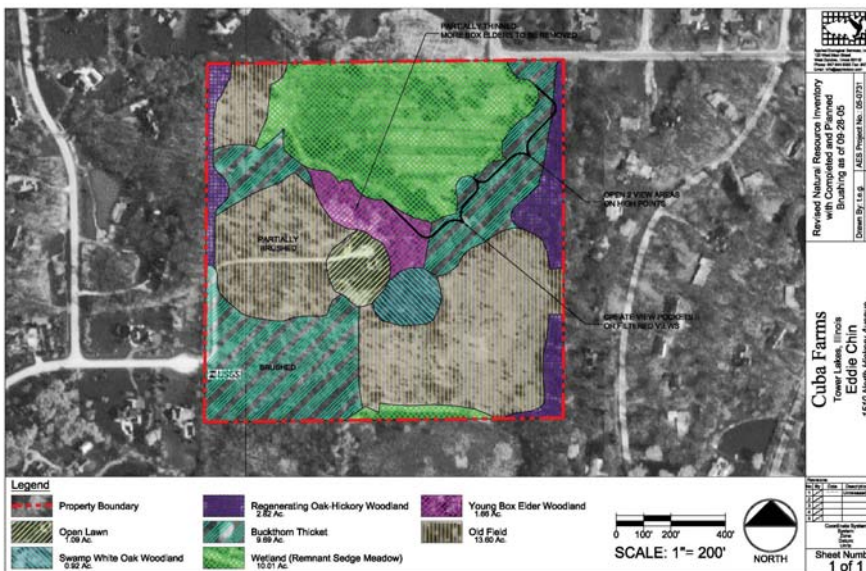

- The design of this project has been completed

Project Statement

Legacy is a high-end, luxury conservation development that Applied Ecological Services, Inc. (AES) was hired to design. AES used a conservation development approach with the key goal being to protect the high-quality wetlands on site. AES designed *with* nature in mind, as always, by protecting the natural elements of the area while enhancing and creating new nature during the process. All of the lots in the development abut open space, which helps home owners to get direct access to open space. AES also designed meandering trail systems that interconnect throughout the development. The trail systems offer home owners an opportunity to take advantage of the open space provided on the site, which includes wooded uplands, wildlife habitat, community gathering areas, and much more.
